

*# Initially all players sit in a circle*

*# Display the text to let players stand*

print the text "Players, Please Stand Up." on the screen

*#Set a random timer for 10-25 seconds*

Ask the user to input a number for the program to sleep

WHILE the program is sleeping:

    players can choose to sit down or stand

*#Track the people who sat down and create a list*

    write a list to record the names of players who sat down

    IF the player sat down when the program sleeping:

        add the name to the list

    ELSE continues watching the players

*#When the game finishes, inform the players time is up*

    If the time is up and the program awakes:

        print the text "Time Up!" and show the picture

        the game ends

*#The game ends and shows the name of the winner*

Show the last name of the player in the list on the screen, and say "Name of the player, you win!"
